

- How to deal with different languages concurrently?
 - What if the application is not in Python?
 - What about PilotJob frameworks that don't have a programmable interface?
- + Simple?

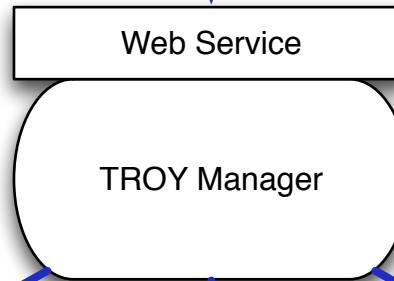

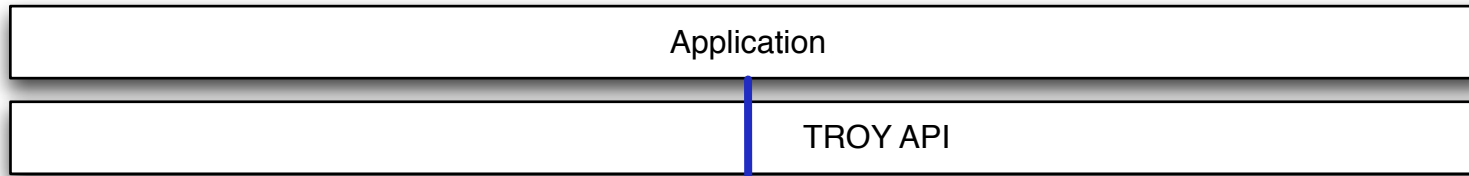

+ Implementation details of PilotJob hidden behind adaptor
- What if the application is not in Python?
(API, Manager and CPI could be programmed for any language)

+ Implementation details of PilotJob hidden behind web services
- What if the application is not in Python?
(API and Manager could be programmed for any language)

- + Application could be written in any language
- + Concurrent operation of multiple language
PilotJobs is not limited
- Webservice vs library call might make things more complex?
